## Introduction

In Module 11.3, students engage in an inquiry-based, iterative process for research. Building on work with evidence-based analysis in Modules 11.1 and 11.2, students explore topics that lend themselves to multiple positions and perspectives. Students gather and analyze research based on vetted sources to establish a position of their own. Students first generate a written evidence-based perspective, which serves as the early foundation of what will ultimately become a written research-based argument paper. The research-based argument paper synthesizes and articulates several claims using valid reasoning and relevant and sufficient evidence to support the claims. Students read and analyze sources to surface potential problem-based questions for research, and develop and strengthen their writing by revising and editing.

In Unit 11.3.1, students closely read Elie Wiesel’s Nobel Lecture, “Hope, Despair and Memory,” focusing on the central ideas of memory, hope, solidarity, and suffering and how they build and interact over the course of the lecture. As students analyze the text, they examine Wiesel’s use of rhetoric and delineate his argument in the lecture. Additionally, the text serves as springboard to research, as students surface and track potential research topics that emerge from the text.

In Unit 11.3.2, students continue the research process begun in Unit 1. Students begin to learn and engage in this iterative process by pursuing problem-based research questions. They also begin to deepen their understanding of their areas of investigation by using guiding inquiry questions and evaluating textual arguments. Students use this inquiry-based process to gather, assess, read, and analyze sources. In the latter half of the unit, students begin to organize and synthesize research findings to establish a position about a specific problem-based question.

In Unit 11.3.3, students engage in the writing process with the goal of synthesizing and articulating their evidence-based research position. The end product of this unit is a final draft of a research-based argument paper that articulates a perspective gleaned from research throughout Module 11.3. The writing cycle, in which students self-edit, peer review, and continually revise their work, serves as the primary framework for this unit.

### Module Performance Assessment

In this four-lesson Module Performance Assessment, students use technology to present their existing research in the format of a video presentation. Students reconceptualize their argument-based research papers for a specific audience, considering the most impactful and relevant evidence to present in a three- to five-minute video presentation. Additionally, students evaluate each other’s presentations via accountable peer review.

<b>Prompt</b>
<p>Build on the analysis you did for your research-based argument paper by producing a three- to five-minute video presentation. Distill and reorganize your research for a specific audience and offer essential points of the research in an engaging video presentation that demonstrates command of content and uses formal spoken English. Your presentation should make strategic use of the video format to enhance and add interest to your research findings. The presentation should also state your</p>

central claim, two supporting claims with relevant and sufficient evidence, and one counterclaim with corresponding limitations. Further, your video should also present information, findings, and supporting evidence clearly, concisely, and logically such that listeners can follow your line of reasoning.

After publishing your video, you will review a minimum of three video presentations using the Speaking and Listening Rubric and Checklist as a guide to offer feedback and questions via online comments.

## Process

The Module Performance Assessment requires students to reorganize essential information from their research-based argument papers according to time specifications, content requirements, and audience knowledge considerations. Additionally, students take into account any teacher feedback they may have received during the preparation of their research-based argument papers, such that the organization, development, substance, and style of the end product is appropriate for the purpose and task. Students prepare the content for the presentations, familiarize themselves with the video recording technology to be used, and record and upload their presentations to a website. The video presentations should not be simply an oral version of students' research papers, but should instead enhance analysis and add interest, leveraging the flexibility of digital media to create a dynamic lens through which the audience sees the research. Students' reconceptualization also gives them a chance to deepen their understanding of their topic by applying considerations for a new audience, and modifying the content to maximize engagement. Finally, students engage in feedback-based peer review through the use of online comments.

## Lesson 1

Students begin to prepare their presentations based on the Module Performance Assessment prompt. Instruct students to review and annotate their research-based argument papers to determine which information to include in their presentations. Display and distribute the 11.3 Video Presentation Outline Tool. Instruct students to use this tool as a resource to organize their reconceptualization of their research paper for their new audience by recording information from their annotated research-based argument papers.

Instruct students to produce a three- to five-minute video presentation (a maximum of 500 words) that clearly articulates the central claim, two supporting claims with evidence, and one counterclaim with corresponding limitations (rebuttals). Remind students that this assessment requires them to reconceptualize their research-based argument paper from a written document to an oral presentation. Explain to students these presentations cannot simply be a reading of their papers, but should use the video format to strategically present the most compelling and relevant aspects of their

evidence, claims, and reasoning for a new audience. Explain that the video medium allows students to build upon, refine and distill their research-based arguments while using their oral presentation skills to present their arguments in dynamic and convincing ways.

### Lesson 2

Students complete the 11.3 Video Outline Tool and prepare for their presentations. Students spend any remaining time familiarizing themselves with video recording software.

### Lesson 3

Students come to class prepared to record their video presentations. Students record and upload their video presentations on an appropriate video hosting website, using the Speaking and Listening Rubric and Checklist to guide their work.

### Lesson 4

Students view and peer review a minimum of three peer video presentations. Students use the SL.11-12.3 portion of the Speaking and Listening Rubric and Checklist to guide their feedback via online comments on the video hosting website.
