Algebra II Unit 3  
**Unit Overview**

### Unit 3: Rational Functions and Equations

#### Overview

This course uses Agile Mind as its primary resource, which can be accessed at the following URL:

- [www.orange.agilemind.com](http://www.orange.agilemind.com)

Each unit consists of 1-3 topics. Within each topic, there are “Exploring” lessons with accompanying activity sheets, practice, and assessments. The curriculum guide provides an analysis of each topic, detailing the standards, objectives, skills, and concepts to be covered. In addition, it will provide suggestions for pacing, sequence, and emphasis of the content provided.

#### Essential Questions

- How do you identify an arithmetic series and a geometric series?
- How do you write a function rule for arithmetic series and geometric series?
- What is an exponential function?
- What are the key characteristics of the parent graph of the parent graph of an exponential function?
- How do you use transformation to graph exponential function?
- How are exponential growth/decay used to solve real world problems?
- What is a logarithmic function?
- What are the characteristics of the parent graph of a logarithmic function?
- How do you use transformations to sketch graphs of logarithmic functions?
- How do you evaluate logarithmic functions?
- How do you solve exponential equations?
- How do you solve logarithmic equations?

#### Enduring Understandings

- In an arithmetic series, each value in the series differs from its predecessor by the same amount and in geometric series, the ratio of each term to its predecessor is a constant.
- In arithmetic series the function rule is linear and in a geometric series the function rule is exponential
- All arithmetic and geometric sequences can be expressed recursively and explicitly.
- Exponential function is expressed in the form of  $f(x) = ab^x$ , where  $b$  is the constant multiplier and greater than 1,  $a$  is the initial value and  $x$  is the exponent.
- Exponential value shows rapid growth or rapid decay
- Parent graph of the exponential function has a domain of  $(-\infty, \infty)$  and range of  $(0, \infty)$ , no extrema or symmetry, has an  $y$  intercept of  $(0,1)$  and the function is increasing.
- Exponential growth model are used mostly for population growth and compound interest.
- Exponential Decay model are used for half-life of chemical compound and also for population that is decreasing.
- Logarithmic function is the inverse of exponential function and has the form of  $\log_b y = x$ , where  $b$  is the base and greater than 1,  $y$  is the argument and  $x$  is the exponent.
- In order to evaluate logarithmic function you need to find inverse.
- In order to solve exponential and logarithmic equation you need to find inverse.

## Common Core State Standards

- 1) **A.SSE.4**: Derive the formula for the sum of a finite geometric series (when the common ratio is not 1), and use the formula to solve problems.
- 2) **A-CED.2**: Create equations in two or more variables to represent relationships between quantities; graph equations on coordinate axes with labels and scales.
- 3) **F.IF.3**: Recognize that sequences are functions, sometimes defined recursively, whose domain is a subset of the integers. For example, the Fibonacci sequence is defined recursively by  $f(0) = f(1) = 1$ ,  $f(n+1) = f(n) + f(n-1)$  for  $n \geq 1$ .
- 4) **F.BF.1**: Write a function that describes a relationship between two quantities.
  - a. Determine an explicit expression, a recursive process, ~~or steps for calculation from a context.~~
- 5) **F.BF.2**: Write Arithmetic and Geometric sequence both recursively and with an explicit formula, use them to model situations, and translate between the two forms.
- 6) **F.LE.2**: Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (include reading these from a table).
- 7) **F.IF.1**: *Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If  $f$  is a function and  $x$  is an element of its domain, then  $f(x)$  denotes the output of  $f$  corresponding to the input  $x$ . The graph of  $f$  is the graph of the equation  $y = f(x)$*
- 8) **F.IF.2**: *Use function notation. Evaluate functions for inputs in their domains, and interpret statements that use function notation in terms of a context.*
- 9) **F.IF.5**: *Relate the domain of a function to its graph and, where applicable, to the quantitative relationship it describes. For example, if the function  $h(n)$  gives the number of person-hours it takes to assemble  $n$  engines in a factory, then the positive integers would be an appropriate domain for the function.*
- 10) **A-CED A.2**: equations in two or more variables to represent relationships between quantities; graph equations on coordinate axes with labels and scales.
- 11) **F-BF.5**: (+) Understand the inverse relationship between exponents and logarithms and use this relationship to solve problems involving logarithms and exponents
- 12) **A.SSE.3c**: Use the properties of exponents to transform expressions for exponential functions. For example the expression  $1.15t$  can be rewritten as  $(1.151/12)^{12t} \approx 1.012^{12t}$  to reveal the approximate equivalent monthly interest rate if the annual rate is 15%
- 13) **F-IF B.4**: Interpret functions that arise in applications in terms of the context. For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. Key features include: intercepts; intervals where the function is increasing, decreasing, positive, or negative; ~~relative maximums and minimums; symmetries; end behavior; and periodicity.~~
- 14) **F-IF B.5**: Relate the domain of a function to its graph and, where applicable, to the quantitative relationship it describes. For example, if the function  $h(n)$  gives the number of person-hours it takes to assemble  $n$  engines in a factory, then the positive integers would be an appropriate domain for the function.
 

**F-BF.3**: Identify the effect on the graph of replacing  $f(x)$  by  $f(x) + k$ ,  $k f(x)$ ,  $f(kx)$ , and  $f(x + k)$  for specific values of  $k$  (both positive and negative); find the value of  $k$  given the graphs. Experiment with cases and illustrate an explanation of the effects on the graph using technology. Include recognizing even and odd functions from their graphs and algebraic expressions for them.

## Algebra II Unit 3

- 15) **F-IF.7e**. Graph exponential and logarithmic functions, showing intercepts and end behavior, ~~and trigonometric functions, showing period, midline, and amplitude~~
- 16) **F-IF.8b**: Use the properties of exponents to interpret expressions for exponential functions. For example, identify percent rate of change in functions such as  $y = (1.02)^t$ ,  $y = (0.97)^t$ ,  $y = (1.01)^{12t}$ ,  $y = (1.2)^{t/10}$ , and classify them as representing exponential growth or decay
- 17) **F-LE A.1.c**: Distinguish between situations that can be modeled with ~~linear functions~~ and with exponential functions. Recognize situations in which a quantity grows or decays by a constant percent rate per unit interval relative to another.
- 18) **F-LE A.2**: Construct ~~linear~~ and exponential functions, including ~~arithmetic and geometric sequences~~, given a graph, a description of a relationship, or two input-output pairs (include reading these from a table).
- 19) **F-LE A.3**: Observe using graphs and tables that a quantity increasing exponentially eventually exceeds a quantity increasing ~~linearly, quadratically, or (more generally) as a polynomial function.~~
- 20) **F-LE A.4**: Construct and compare linear, quadratic, and exponential models and solve problems 4. For exponential models, express as a logarithm the solution to  $abct = d$  where  $a$ ,  $c$ , and  $d$  are numbers and the base  $b$  is 2, 10, or  $e$ ; evaluate the logarithm using technology
- 21) **F-LE A5**. Interpret the parameters in a ~~[n]-linear~~ or exponential function in terms of a context
- 22) **A-CED. A.1**: Create equations that describe numbers or relationships 1. Create equations and inequalities in one variable and use them to solve problems. Include equations arising from linear and quadratic functions, and simple rational and exponential functions.
- 23) **A.RE.D.11**. Explain why the  $x$ -coordinates of the points where the graphs of the equations  $y = f(x)$  and  $y = g(x)$  intersect are the solutions of the equation  $f(x) = g(x)$ ; find the solutions approximately, e.g., using technology to graph the functions, make tables of values, or find successive approximations. Include cases where  $f(x)$  and/or  $g(x)$  are linear, polynomial, rational, absolute value, exponential, and logarithmic functions.

Algebra I Content

Algebra II Unit 3

**Unit 3: Sequence and series, exponential function, Logarithmic function(35 Days)**

- Arithmetic and geometric sequences and series
- Exponential functions
- Logarithmic functions
- Using Logarithms to solve equations and inequalities
- Rewrite expressions involving radicals and rational exponents using the properties of exponents.

Big Rock CCSS	Related Topic	Lesson Objective	Notes
<b>F.IF.3</b> : Recognize that sequences are functions, sometimes defined recursively, whose domain is a subset of the integers.	Arithmetic sequence and series	Lesson 1.1 <ul style="list-style-type: none"> <li>• Recognize arithmetic sequences</li> <li>• Identify the common difference. Recognize geometric sequences and identify the common ratio</li> </ul>	
<b>F.IF.3</b> <b>F.BF.1</b> : Write a function that describes a relationship between two quantities. Determine an explicit expression, a recursive process, or steps for calculation from a context <b>F.BF.2</b> : Write Arithmetic and Geometric sequence both recursively and with an explicit formula, use them to model situations, and translate between the two forms.	Geometric sequence and series	Lesson 1.2 <ul style="list-style-type: none"> <li>• Recognize that sequences are functions with integer domains.</li> <li>• Use function notation to write recursive rule for an arithmetic sequence</li> <li>• Use the explicit expression to find a future term in a sequence</li> <li>• Use the concept of sequence to solve real life problem</li> </ul>	
<b>F.IF.3, F.BF.1, F.BF.2</b> <b>F.LE.2</b> : Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (include reading these from a table).		Lesson 2.1 <ul style="list-style-type: none"> <li>• Write the function for Geometric sequence</li> </ul> Lesson 2.2 <ul style="list-style-type: none"> <li>• Use the geometric sequence concept to solve real life problem</li> </ul>	
<b>A.SSE.4</b> : Derive the formula for the sum of a finite geometric series (when the common ratio is not 1), and use the formula to solve problems. Clarification: Students will not have to derive the formula in PARCC but they will have to use it		Lesson 2.3 <ul style="list-style-type: none"> <li>• Derive the Geometric series</li> <li>• Use Geometric Series to solve problems</li> </ul> <p>Note: Derive the formula for the series with students before using it.</p>	
<b>F.LE.2</b> : Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (include reading these from a table).	Exponential Functions	Lesson 3.1A <b>(F.LE.2, A.SSE.1, F.IF.8b)</b> Using the concept of Geometric Sequence SWBAT <ul style="list-style-type: none"> <li>• Construct an exponential function and use it to solve problems</li> </ul>	

Algebra II Unit 3

<p><b>A.SSE.1</b> Interpret expressions that represent a quantity in terms of its context.*</p> <p><b>F.IF.8b:</b> Use the properties of exponents to interpret expressions for exponential functions. For example, identify percent rate of change in functions such as <math>y = (1.02)^t</math>, <math>y = (0.97)^t</math>, <math>y = (1.01)12^t</math>, <math>y = (1.2)^t/10</math>, and classify them as representing exponential growth or decay.</p> <p><b>F.IF.4:</b> For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and <del>sketch graphs showing key features given a verbal description of the relationship.</del> <i>Key features include: intercepts; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; end behavior; and periodicity.*</i></p> <p><b>F.LE.5</b> Interpret the parameters in a linear or exponential function in terms of a context.</p> <p><b>N. RN.2</b> Rewrite expressions involving radicals and rational exponents using the properties of exponents</p> <p><b>A.SSE.3c</b> Use the properties of exponents to transform expressions for exponential functions. For example the expression <math>1.15^t</math> can be rewritten as <math>(1.15^{1/12})^{12t} \approx 1.012^{12t}</math> to reveal the approximate equivalent monthly interest rate if the annual rate is 15%.</p>		<ul style="list-style-type: none"> <li>• Interpret parts of expressions in terms of its context (growth/decay factor and initial amount)</li> <li>• Identify exponential growth /decay from the context</li> <li>• Identify exponential growth and decay from the function and graph</li> </ul> <p>3.1b <b>(F.LE.2, F.IF.4, F.LE.5)</b> Using graphs, function and table SWBAT</p> <ul style="list-style-type: none"> <li>• Identify appropriate values for growth/decay factor.</li> <li>• Interpret the graph and expression in terms of context</li> <li>• Identify and Interpret the domain range and end behavior of the exponential function</li> </ul> <p>Lesson 3.2a <b>(N.RN.2, A.SSE.3c)</b></p> <ul style="list-style-type: none"> <li>• Transform Exponential Functions using properties of exponents</li> <li>• Rewrite expressions using properties of exponents.</li> </ul> <p>i.e Using the properties of exponents, re-write exponential functions based on the structure of expression(NO context)</p> <p>Lesson 3.2b <b>(A.SSE.3c)</b></p> <ul style="list-style-type: none"> <li>• Transform Exponential Functions using properties of exponents</li> </ul> <p>i.e. Using the properties of exponents, re-write exponential functions based on the context For example:</p> <ul style="list-style-type: none"> <li>• Convert annual interest rate quarterly, monthly And use it to solve problem half life.....(Refer to PARCC 2016 question 18)</li> </ul>

\*1 Agile Mind Block = 45 minutes

## Topic 1: Arithmetic and Geometric series and sequences

Topic Objectives (Note: these are not in 3-part or SMART objective format)

1. Recognize arithmetic sequences and identify the common difference.
2. Recognize geometric sequences and identify the common ratio.
3. Recognize that sequences are functions with integer domains.
4. Find explicit terms and sums for arithmetic and geometric sequences.
5. Determine convergence and divergence of infinite series
6. Learn the conditions for convergence of infinite geometric series
7. Use explicit formulas to find the sum of an infinite geometric series.

Focused Mathematical Practices

- MP 2: Reason abstractly and quantitatively
- MP 3: Construct viable arguments and critique the reasoning of others
- MP 5: Use appropriate tools strategically
- MP 6: Attend to precision
- MP 7: Look for and make use of structure
- MP 8: Express regularity in repeated reasoning

Vocabulary

Arithmetic sequence, common difference, geometric sequence, common ratio, recursive definition, arithmetic series, geometric series, indices, sigma, finite series, infinite series, partial sums, convergent, and divergent.

Fluency

- ✓ Graphing equations
- ✓ Using function notation
- ✓ Solving Literal equations ( $cx + a = d$ )
- ✓ Identifying rate of change from tables, graphs and equations

### Suggested Topic Structure and Pacing

Block	Objective(s) covered	Agile Mind “Blocks” (see Professional Support for further lesson details)	MP	Additional Notes
1	1,2 and part of 4	<i>Block 1</i> <i>Block 2</i>	2,3, 5, 8	Sequence and series were introduced to students in Algebra I <i>_Topic 3_explore_function</i> notation from page 7 – 10. Same example of congruent triangles was used
2-3	3,4	<i>Block 3</i> <i>Block 4</i> <i>Block 5</i>	2, 4, 5, 8	Students will be introduced to summation notation for the first time. You need to spend extra time on having student practice with sigma notation.
4	1,2,3,4	<i>Block 6</i> <i>Block 7</i>	5, 4, 7, 8	Block 7 : students completing one of the constructed responses; this is optional/flexible.

## Topic 12: Exponential functions

Topic Objectives (Note: these are not in 3-part or SMART objective format)

1. Formulate exponential relationships written in recursive notation
2. Derive the formula for compound interest.
3. Calculate compound interest yearly, monthly, weekly, daily
4. Transform exponential function

Focused Mathematical Practices

- MP 2: Reason abstractly and quantitatively
- MP4: Model with mathematics
- MP 5: Use appropriate tools strategically
- MP 6: Attend to precision
- MP7: Look for and make sense of structure

Vocabulary

Exponential relationship, recursive notation, compound interest

Fluency

- Exponential function
- Inverse function
- Domain and Range

### Topic 13: Logarithmic function

Topic Objectives (Note: these are not in 3-part or SMART objective format)

1. Develop an understanding of the inverse relationship between exponential and logarithmic functions and convert back and forth between exponential and logarithmic functions.
2. Identify domain and range of exponential and logarithmic function with context and without context
3. Apply the prior knowledge of transformation to transform logarithmic functions
4. Apply properties of exponents to derive log sum and log difference property
5. Develop log exponential property
6. Define the term common logarithm and also develop the change of base formula

Focused Mathematical Practices

- MP 2: Reason abstractly and quantitatively
- MP4: Model with mathematics
- MP7: Look for and make sense of structure

Vocabulary: Rational Equations, Extraneous solutions

Fluency

- Exponential functions
- Properties of exponents
- Domain and range of a function
- Transformations of functions
- Inverse functions

#### Suggested Topic Structure and Pacing

## Topic 14: Using logarithms to solve equations and inequality

Topic Objectives (Note: these are not in 3-part or SMART objective format)

After completing the topic square root functions and equations, students will be able to

1. Use tables and graphs to solve exponential equations
2. Solve exponential equations analytically/Algebraically

Focused Mathematical Practices

- MP 4: Model with mathematics
- MP 6: Attend to precision
- MP 7: Look for and make use of structure

Vocabulary

Quadratic formula, Imaginary numbers, complex numbers, discriminant, real roots and complex roots

Fluency

- Multiple solution strategies (tabular, graphical, analytic)
- Exponential and logarithmic functions

## Supplemental Lessons

## Lesson 3.1a

CCSS A.SSE.3: Choose and produce an equivalent form of an expression to reveal and explain properties of the quantity represented by the expression.

CCSS N.RN.2: Rewrite expressions involving **radicals and rational exponents** using the properties of exponents.

SMP: MP7

Evidence statement: (A.SSE.B)

Use the structure of polynomial, rational, or **exponential expression** to rewrite it, in a case where two or more rewriting steps are required.

\* **Tasks do not have context.**

Lesson objectives:

\* Rewrite expressions using properties of exponents

Task1:

Part A:

Do you think the following statements are true or false? Explain your reasoning. Talk to a partner.

$$2^{2x} = 4^x \qquad 4^{2x} = 16^x \qquad 3^{3x} = 9^x \qquad (\sqrt[4]{5})^x = 5^{x/4}$$

Part B:

Which equations are true for all values of  $x$ ?

Select **all that apply** and showing your work and to **justify the answer(s) that you select.**

a.  $3^{2-x} = 3^2 - 3^x$

b.  $3^{x+2} = 9(3^x)$

c.  $(3^x)^2 = (3^2)^x$

## Algebra II Unit 3

d.  $9^{x+2} = 3^{2x+4}$

e.  $27^x = (3^x)^3$

f.  $(\sqrt{5})(\sqrt[3]{5}) = 5^{\frac{5}{6}}$

Part C: Consider the original expression  $3^x - 3^{x+2}$

Rewrite this expression as  $a \cdot 3^x$

### Guided Practice:

1. Solve each problem for x

1)  $4^x = 4^2$

2)  $4^x = 2^b$

3)  $32^{\frac{x}{3}} = 8^{x-12}$

2. For  $m > 0$ , the expression  $\frac{2(\sqrt{m})^2}{\sqrt[4]{m}}$  can be rewritten in the form  $2m^a$ , where "a" is a fraction. What is the value of a?

3. In the equation  $(5^{\frac{1}{2}})(5^{\frac{2}{3}})^4 = 5^x$ , what is the value of x?

Algebra II Unit 3  
Independent Practice:

1. An expression is given

$$\frac{(3x)^{\frac{2}{3}}}{(3x)^{\frac{2}{3}}}$$

If  $x > 0$ , which of the expression listed is equivalent to the expression given? Select all that apply.

- a.  $\frac{1}{3x}$       b.  $\frac{1}{\sqrt{3x}}$       c.  $\frac{1}{3\sqrt{x}}$       d.  $(3x)^{1/2}$       e.  $(3x)^{-1/2}$

2.

$$f(x) = \frac{(x^{-2})^3}{\left(x^{\frac{1}{4}}\right)^8}$$

If  $f(x)$  can be rewritten as  $x^a$ , what is the value of  $a$  ?

3. Rewrite the expression  $\sqrt[3]{x^2}$  in exponential form.

4. Rewrite the expression  $9\sqrt[5]{27}$  as a power of 3.

## Algebra II Unit 3

5. Which of the following is equivalent to  $a^{\frac{1}{2}}b^{\frac{3}{4}}$  ?

a.  $\sqrt{ab^3}$

b.  $\sqrt{a^2b^3}$

c.  $\sqrt[4]{ab^3}$

d.  $\sqrt[4]{a^2b^3}$

### Enrichment

A company that manufactures memory chips or digital cameras uses the formula

$C = 3\sqrt{n} (40\sqrt[6]{n} + 9\sqrt[4]{n})$  to determine the cost,  $c$ , in dollars, of producing  $n$  chips. This formula can be written as  $c = 120\sqrt[3]{n^a} + 27\sqrt[4]{n^b}$ , where  $a$  and  $b$  are constants. What are the values of  $a$  and  $b$ ?

Algebra II Unit 3  
Lesson 3.1 b

CCSS: A.SSE.3c: Use the properties of exponents to transform expressions or exponential functions. For example the expression  $1.15t$  can be rewritten as  $(1.15^{1/12})^{12t} \approx 1.012^{12t}$  to reveal the approximate equivalent monthly interest rate if the annual rate is 15%

Evidence statement:

\*Tasks have a real-world context.

\*The equivalent form must reveal something about the real-world context.

\*Tasks require students to make the connection between the equivalent forms of the expression.

SMP: MP4, MP7

Task: 1.2b (CCSS: A.SSE.3c)

A bank provides a yearly compound interest proposal for student-saving account by using the formula

$$f(t) = P(1.02)^t \quad (P: \text{the initial money deposited; } t: \text{ \# of years})$$

Eli wants to find a formula which compounds each month but will have the same balance by the end of each year in his account as using the bank yearly compound interest formula. He opened an account and deposited \$500 in the account. He created the formula

$$g(m) = 500(b)^m \quad (m: \text{ \# of months})$$

Eli thinks  $g(12) = f(1)$ . What does that mean?

Part A: Which of the following can be the value of  $b$  for monthly compound formula?

- (a.)  $b = 1.02$       (b.)  $b = 1.02^{12}$       (c.)  $b = 1.02^{1/12}$       (d.)  $b = \frac{1.02}{12}$

**Show your work to support the answer that you chose from above.**

Part B: Which of the following expression can be used for Eli's formula  $g(m)$  ?

- (a.)  $g(m) = 500(1.02)^{12m}$       (b)  $g(m) = 500\left(\frac{1.02}{12}\right)^m$       (c)  $g(m) = 500(1.02)^m$       (d)  $g(m) = 500(1.02)^{m/12}$

**Show your work to support the answer that you chose from above.**

### Algebra II Unit 3

Part C: Does the formula that you chose from Part B work for any year? Select a year to test your formula.

Part D: Based on the bank's formula derive a quarterly compound interest formula,  $k(q)$ , for depositing \$500 in a student saving account? ( $q$ : number of quarter years)

## Algebra II Unit 3

Guided Practice:

Question 1:

An analyst studying the population of a town determines that the population can be modeled by the formula  $f(t)=120,000(1.015)^t$ , where  $f(t)$  represents the population after  $t$  years.

A city council member makes this claim:

“Based on the formula, after 1 year the population will have increased by 1,800. Since 2,800 divided by 12 is 150, we can use the fact that the population increased by 150 people per month to predict the future population of the town”.

Part A: Explain why the city council member’s claim is or is not a valid way to predict the population.

Part B: Modify the initial given formula such that it represents the predicted population by month.

Part C: What is the population after 50 months?

Question 2:

The amount of a certain element that remains after  $t$  hours can be determined using the expression  $3(0.6)^{\frac{t}{25}}$

Which of the following expression can be used to determine the element that remains after  $n$  minutes?

- (a)  $3(0.6)^{60n/25}$       (b)  $3(0.6)^{25n}$       (c)  $3(0.6)^{n/25}$       (d)  $3(0.6)^{n/60 \cdot 25}$

Show your work to support your answer.

Algebra II Unit 3

3. The population, in thousands, of a certain city can be modeled by the function

$$P(t) = 320(0.96)^{0.5t}, \text{ where } t \text{ is the number of years since 2000.}$$

Part A: What was the population of the city in the year 2000?

Part B: Describe the rate of change of the city's population per year.

Enrichment material:

A scientist has a sample of bacteria that initially contains 10 million microbes. He observes the sample and finds that the number of bacterial microbes doubles every 20 minutes.

Part A: Write an exponential function that represents  $M$ , the total number of bacterial microbes in millions, as a function of  $t$ , the number of minutes the sample has been observed.

Part B: Determine how much time, to the nearest minute, will pass until there are 67 million bacterial microbes.

## Ideal Math Block

*The following outline is the department approved ideal math block for grades 9-12.*

- 1) Do Now (7-10 min)
  - a. Serves as review from last class' or of prerequisite material
  - b. Provides multiple entry points so that it is accessible by all students and quickly scaffolds up
- 2) Task/Launch (10 – 15 min)
  - a. Designed to introduce the lesson
  - b. Uses concrete or pictorial examples
  - c. Attempts to bridge the gap between grade level deficits and rigorous, on grade level content
  - d. Provides multiple entry points so that it is accessible by all students and quickly scaffolds up
- 3) Mini-Lesson (15-20 min)
  - a. Design varies based on content
  - b. May include an investigative approach, direct instruction approach, whole class discussion led approach, etc.
  - c. Includes CFU's
  - d. Anticipates misconceptions and addresses common mistakes
- 4) Class Activity (25-30 min)
  - a. Design varies based on content
  - b. May include partner work, group work/project, experiments, investigations, game based activities, etc.
- 5) Independent Practice (7-10 min)
  - a. Provides students an opportunity to work/think independently
- 6) Closure (5-10 min)
  - a. Connects lesson/activities to big ideas
  - b. Allows students to reflect and summarize what they have learned
  - c. May occur after the activity or independent practice depending on the content and objective
- 7) DOL (5 min)
  - a. Exit slip

**MTSS MODEL**

between the exponential function  $f(x) = a \cdot bx$  and the compounding interest formula. Talk about the starting value and the constant multiplier.

- **NOTE: represent t is number of times interest rate is compounded instead of number of years**

**Group work/ Partner work (20 minutes)**

Present the problem on page 5. Have students work in pairs or small groups to answer the questions. [SAS 3, questions 7-10]

Debrief: Show the answers on page 5 for verification

Derive the general formula for compound interest  $p \left(1 + \frac{r}{n}\right)$

**Independent Practice (12 minutes):**

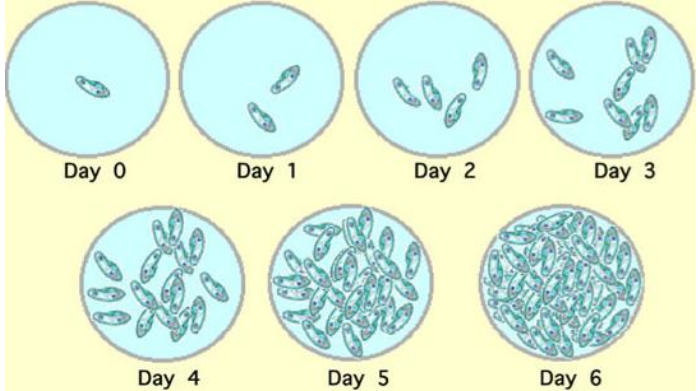

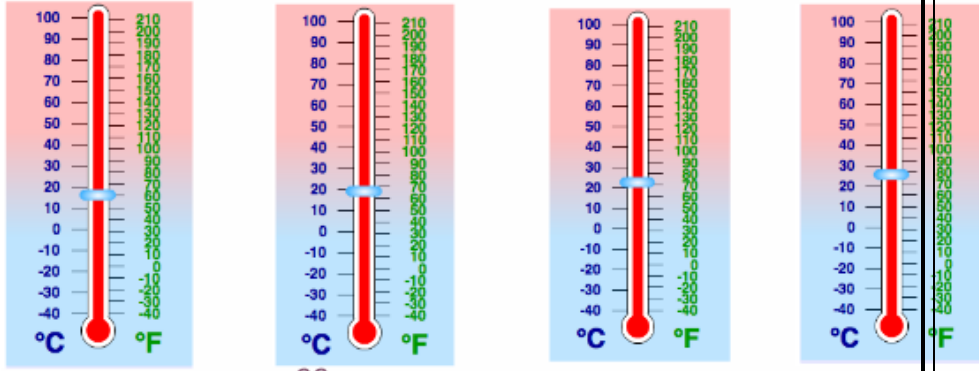

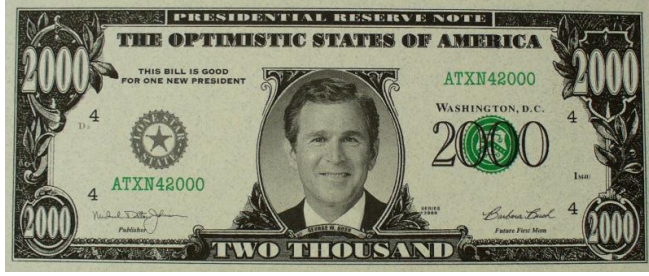

- Re-inforce SAS 3 Question 12 and 13
- Debrief and check for 2 minutes

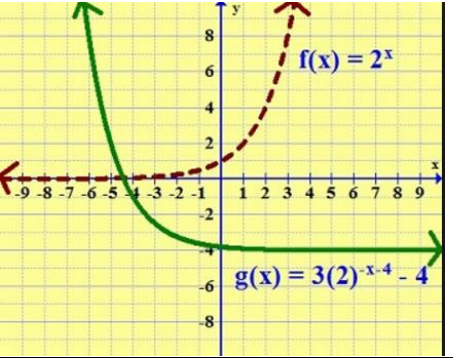

**Closure (2 minutes):**

- Ask students what is compounding means, what does it mean to compound quarterly, monthly or yearly and which one is better.
- Ask students hat each variable in compound interest represent.

**DOL (5 minutes):**

## Multiple Representations

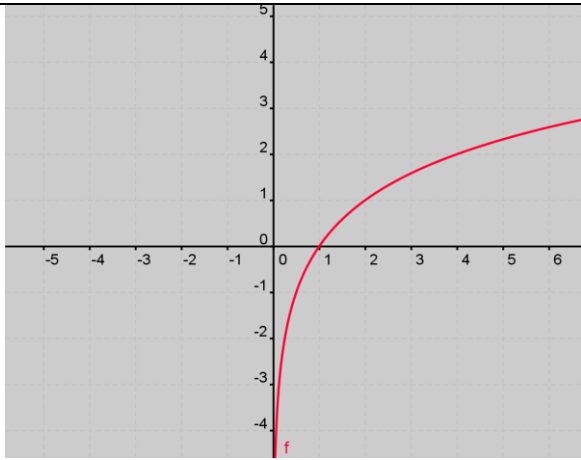

<b>Exponential function</b>	
<b>Verbal description</b>	Exponential function is a function in the form of $y = ab^x$ in which the independent variable is the exponent, $a$ is the initial value, and $b$ is a constant
<b>Real Life</b>	<p><b>Geometric Sequence</b></p> <div style="text-align: center;">  <p>Day 0      Day 1      Day 2      Day 3</p> <p>Day 4      Day 5      Day 6</p> </div> <p>Changes in Paramecium over six days period is double from the preceding day.</p> <div style="text-align: center; margin-top: 20px;">  </div> <p>Increasing the temperature of a cold room by 10% every hour follows a geometric sequence of 60, 66, 73, 80, 88...with a common ratio of 1.10</p> <p><b>Infinite Series</b></p> <div style="text-align: center; margin-top: 20px;">  </div>

	<p>If you invest \$2000 at the start of every year into an account earning 5% interest. Using the <a href="#">compound interest formula</a>, we find that the value of the account at the end of the first 3 years is:</p> <ul style="list-style-type: none"> <li>Value at End of Year 1 = <math>\\$2000 \times 1.05^1 = \\$2100</math></li> <li>Value at End of Year 2 = <math>\\$2000 \times 1.05^1 + \\$2000 \times 1.05^2 = \\$4305</math></li> <li>Value at End of Year 3 = <math>\\$2000 \times 1.05^1 + \\$2000 \times 1.05^2 + \\$2000 \times 1.05^3 = \\$6620.25</math></li> </ul> <p>If you look closely, you'll see that this sequence of expressions for the value of the investment at the end of each year form a mathematical series where each term is the amount of money invested each year—\$2000—multiplied by the interest rate raised to a higher and higher integer power</p>

**PARCC Sample Item**CCSS.MATH.CONTENT.HSA.SSE.B.3.C

Use the properties of exponents to transform expressions for exponential functions. *For example the expression  $1.15^t$  can be rewritten as  $(1.15^{1/12})^{12t} \approx 1.012^{12t}$  to reveal the approximate equivalent monthly interest rate if the annual rate is 15%.*

- A bank pays depositors a 2% interest rate compounded semiannually. Let  $P$  represent an initial deposit and let  $t$  represent the number of years that the deposit is in the bank. The expression  $P\left(1 + \frac{0.02}{2}\right)^{2t}$  can be used to determine the account balance after  $t$  years. Which expression accurately reflects the annual interest rate?
- A.  $P(1.01)^t$
  - B.  $P(1.21)^t$
  - C.  $P(1.0201)^t$
  - D.  $P(1.0404)^t$

CCSS.MATH.CONTENT.HSF.LE.A.4

For exponential models, express as a logarithm the solution to  $ab^{ct} = d$  where  $a$ ,  $c$ , and  $d$  are numbers and the base  $b$  is 2, 10, or  $e$ ; evaluate the logarithm using technology.

$$\log_2 6 \cong 2.6$$

Use this to solve for  $x$  in the equation  $12 = 8^x$

CCSS.MATH.CONTENT.HSF.BF.B.5

(+) Understand the inverse relationship between exponents and logarithms and use this relationship to solve problems involving logarithms and exponents.

In the overview you developed function rules that modeled the depreciation of two cars. When will the value of both cars be the same?

Car 1:  $20,000(0.92)^t$

Car 2:  $12 = 16,000(0.93)^t$

CCSS: N.RN.2

Algebra II Unit 3

CCSS N.RN.2: Rewrite expressions involving radicals and rational exponents using the properties of exponents.

Task 1:

For  $m > 0$ , the expression  $\frac{2(\sqrt{m})^3}{\sqrt[4]{m}}$  can be rewritten in the form  $2m^a$ , where  $a$  is a fraction.

What is the value of  $a$ ?

Enter your answer in the boxes.

---

Task 2

If  $\sqrt[3]{(x+1)^5} = (x+1)^a$ , for  $x \geq -1$ , and  $a$  is a constant, what is the value of  $a$ ?

- Ⓐ  $\frac{3}{10}$
- Ⓑ  $\frac{5}{6}$
- Ⓒ  $\frac{5}{3}$
- Ⓓ  $\frac{10}{3}$

Algebra II Unit 3

Task 3:

Which expression is equivalent to  $(\sqrt[3]{27})^4$ ?

- Ⓐ 12
- Ⓑ  $9^2$
- Ⓒ  $81^4$
- Ⓓ  $27^{\frac{3}{4}}$

Task 4:

Rewrite the expression  $9\sqrt[5]{27}$  as a power of 3.

Rewrite the expression  $\sqrt[3]{x^2}$  in exponential form.

Which of the following is equivalent to  $a^{\frac{1}{2}}b^{\frac{3}{4}}$ ?

- a.  $\sqrt{ab^3}$
- b.  $\sqrt{a^2b^3}$
- c.  $\sqrt[4]{ab^3}$
- d.  $\sqrt[4]{a^2b^3}$

## Algebra II Unit 3

## Task 5:

A company that manufactures memory chips for digital cameras uses the formula

$c = 3\sqrt{n} (40\sqrt[6]{n} + 9\sqrt[4]{n})$  to determine the cost,  $c$ , in dollars, for producing  $n$  chips. This formula can be written as  $c = 120\sqrt[3]{n^a} + 27\sqrt[4]{n^b}$ , where  $a$  and  $b$  are constants. What are the values of  $a$  and  $b$ ?

Enter your answers in the boxes.

$$a = \boxed{\phantom{000}}, b = \boxed{\phantom{000}}$$

## Task 6

An expression is given.

$$\frac{(3x)}{(3x)^{\frac{3}{2}}}$$

If  $x > 0$ , which of the expressions listed is equivalent to the expression given?

Select **all** that apply.

- A.  $\frac{1}{3x}$
- B.  $\frac{1}{\sqrt{3x}}$
- C.  $\frac{1}{3\sqrt{x}}$
- D.  $(3x)^{\frac{1}{2}}$
- E.  $(3x)^{-\frac{1}{2}}$

## Task 7

Given that  $x > 0$ , which expression is equivalent to  $5\sqrt{xy} + 25\sqrt{x}$ ?

- Ⓐ  $5(xy)^{-1} + 25x^{-1}$
- Ⓑ  $25x^{\frac{1}{2}}(\sqrt{y} + 5)$
- Ⓒ  $\sqrt{x}(25y^{\frac{1}{2}} + 5)$
- Ⓓ  $5x^{\frac{1}{2}}(y^{\frac{1}{2}} + 5)$

Algebra II Unit 3

CCSS: A.SSE2

Use the structure of an expression to identify ways to rewrite it

Task 1:

Which equations are true for all values of  $x$ ?

Select **all** that apply.

A.  $3^{2-x} = 3^2 - 3^x$

B.  $3^{x+2} = 9(3^x)$

C.  $(3^x)^2 = (3^2)^x$

D.  $9^{x+2} = 3^{2x+4}$

E.  $27^x = (3^x)^3$

Task 2:

Solve the equation  $27^x = 9^{x-3}$  for  $x$ .

## Task 3

Consider the equation  $\frac{4^{x^2}}{2^x} = 2$ .

**4. Part A**

Which equation is equivalent to the equation shown?

- Ⓐ  $2^{x^2} = 2$
- Ⓑ  $2^{x^2-x} = 2$
- Ⓒ  $2^{2x} = 2$
- Ⓓ  $2^{2x^2-x} = 2$

**Part B**

Which values are solutions to the equation?

Select **all** that apply.

- Ⓐ -2
- Ⓑ -1
- Ⓒ  $-\frac{1}{2}$
- Ⓓ  $\frac{1}{2}$
- Ⓔ 1
- Ⓕ 2

Task 4

Consider the equation  $(x^2 + 2xy + y^2)(x + y) = 64$ .

**Part A**

What is the value of  $x + y$  ?

- Ⓐ 2
- Ⓑ 4
- Ⓒ 8
- Ⓓ 32

**Part B**

If  $z > 0$  and  $z^x z^y = 81$ , what is the value of  $z$ ?

Task 5

Consider the expression  $3^x - 3^{x-2}$ .

**Part A**

Which is an equivalent form of the given expression?

- Ⓐ  $3^x - 9(3^x)$
- Ⓑ  $3^x - 2(3^x)$
- Ⓒ  $3^x - \frac{3^x}{2}$
- Ⓓ  $3^x - \frac{3^x}{9}$

**Part B**

This expression can also be rewritten in the form  $a(3^x)$ , where  $a$  is a constant. What is the value of  $a$  ?

- Ⓐ  $\frac{1}{9}$
- Ⓑ  $\frac{1}{2}$
- Ⓒ  $\frac{8}{9}$
- Ⓓ  $\frac{3}{2}$

Task 6

If  $(7^{\frac{1}{4}})^x = 7$ , what is the value of  $x$ ? Explain your reasoning.

Task 7

The function  $f(x) = 8^{2x+3}$  is equivalent to the function  $f(x) = 2^a b^x$ , where  $a$  and  $b$  are integers. What are the values of  $a$  and  $b$ ?

Task 8

Rewrite the function  $g(x) = 10^4 (2^{3x})(0.1^x)$  in the form  $g(x) = n(b)^x$ , where  $n$  and  $b$  are constants.

Task 9:

Which of the following functions is equivalent to  $f(x) = 3^x \cdot 2^{3x+2}$  ?

a.  $f(x) = 2(24)^x$

b.  $f(x) = 2(6)^{3x^2}$

c.  $f(x) = 4(24)^x$

d.  $f(x) = 4(6)^{3x^2}$
